Once a nuclear installation has reached the end of its safe and economical operational lifetime, the need for its

decommissioning arises. Different strategies can be employed for nuclear decommissioning, based on the evaluation of particular hazards and their attendant risks, as well as on the analysis of costs of clean-up and waste management. This allows for decommissioning either soon after permanent shutdown, or perhaps a long time later, the latter course allowing for radioactivity levels to drop in any activated or contaminated components. It is crucial for clear processes and best practices to be applied in decommissioning such installations and sites, particular where any significant health and environmental risks exist. This book critically reviews the nuclear decommissioning processes and technologies applicable to nuclear power plants and other civilian nuclear facilities. Part one focuses on the fundamental planning issues in starting a nuclear decommissioning process, from principles and safety regulations, to financing and project management. Part two covers the execution phase of nuclear decommissioning projects, detailing processes and technologies such as dismantling, decontamination, and radioactive waste management, as well as environmental remediation, site clearance and reuse. Finally, part three details international experience in the decommissioning of nuclear applications, including the main nuclear reactor types and nuclear fuel cycle facilities, as well as small nuclear facilities and legacy nuclear waste sites. Critically reviews nuclear decommissioning processes and technologies applicable to nuclear power plants and other civilian nuclear facilities Discusses the fundamental planning issues in starting a nuclear decommissioning process Considers the execution phase of nuclear decommissioning projects, including dismantling, decontamination, and radioactive waste management, as well as environmental remediation, site clearance and reuse Welding: Skills, Processes, and Practices for Entry-Level Welders is an exciting new series that has

WELDING AND METAL FABRICATION employs a unique hands-on, project-based learning strategy to teach welding skills effectively and keep students highly motivated. This groundbreaking new text connects each welding technique to a useful and creative take-home project, making exercises both practical and personal for students'and avoiding the tedium of traditional, repetitive welding practices. To further enhance the learning process, every welding project includes a set of prints with specifications, like those used in production fabrication shops. This full-featured approach to skill-building reflects the reality of professional welding, where following prints and instructions precisely and laying out, cutting out, and assembling weldment accurately are just as essential as high-quality welding. The included projects are small to conserve materials during the learning process, but detailed instructions and abundant photos and illustrations guide students through a wide range of fabrication skills. Key steps and techniques within the small projects are also linked to larger projects presented at the end of each chapter, enabling students to apply what they have

learned by fabricating and welding something more substantial. This thorough, reader-friendly text also covers relevant academics, such as shop math and measurement, and prepares students for real-world success by having them document their time and materials for each project and prepare a detailed invoice. The stories in this collection occupy a world at once as familiar as a suburban backyard or a southern college's hallowed football field and as strange as a man who buys Savannah, Georgia, and tries to turn it into the perfect Southern city as part of his attempt to win back his estranged wife. The fictional territory of *Carrying the Torch*, is in short, Brock Clarke's, one in which the surreal and the hilarious share a neighborhood with the painfully real and the sweetly ironic. Here readers will encounter characters dislocated by work and love, by huge losses and life's small dramas, men and women who have migrated South in search of redemption--or at least in the hope of leaving the worst behind. In these tales about what people try to leave and find they can't, about the lies we tell the people we love and the myths we create to make life livable, Marly Swick cites an "exceptional originality" as well as an "amazing emotional resonance, a haunting quality." "Notable for their balance of sentiment and restraint, the music of their language, and the haunting human longing that coexists with the irony and the humor," as Lee Martin remarks, these remarkable stories carry forward a tradition reaching from Flannery O'Connor to John Cheever and Donald Barthelme--and arrive at a brilliance all their own. Brock Clarke is an assistant professor of English at the University of Cincinnati. He is the author of the novel *The Ordinary White Boy* and of *What We Won't Do*, a short story collection that won the 2002 Mary McCarthy Prize for Short Fiction.
