Math Trailblazers 2E G3 Teacher Implementation Guide May 10 2021 "A complete research-based, K-5 mathematics program integrating math, science and language arts. [The program] embodies the NCTM Principles and standards for school mathematics and is based on the ideas that mathematics is best learned by solving problems in real-world contexts and that a curriculum should balance conceptual understanding and procedural skill"--P. 4 of cover.

Development of Multiplicative Reasoning in the Learning of Mathematics, The May 22 2022 Two of the most important concepts children develop progressively throughout their mathematics education years are additivity and multiplicativity. Additivity is associated with situations that involve adding, joining, affixing, subtracting, separating and removing. Multiplicativity is associated with situations that involve duplicating, shrinking, stressing, sharing equally, multiplying,

dividing, and exponentiating. This book presents multiplicativity in terms of a multiplicative conceptual field (MCF), not as individual concepts. It is presented in terms of interrelations and dependencies within, between, and among multiplicative concepts. The authors share the view that research on the mathematical, cognitive, and instructional aspects of multiplicative concepts must be situated in an MCF framework.

The United States' Subnational Relations with Divided China Aug 13 2021 This book examines US subnational engagement in foreign relations, or paradiplomacy, with China and Taiwan from 1949 to 2020. As an alternative diplomatic history of the United States' relations with divided China, it offers an in-depth chronological and thematic discussion of state and local communities' responses to the China-Taiwan sovereignty conflict and their impact on US diplomacy. The book explains why paradiplomacy matters not only in the 'low politics' of economic and cultural cooperation, but also in the 'high politics' of diplomatic recognition. Presenting case studies of US states and cities developing policies towards divided China that paralleled, clashed or aligned with those pursued by federal agencies, it also identifies Chinese and Taiwanese objectives and strategies deployed when competing for US subnational ties. Conceptually, the book builds upon Constructivism, redefining paradiplomacy as an institutional fact, reflective of subnational identities and interests, rather than as a subnational pursuit of foreign markets, driven by objective economic forces. Featuring new empirical evidence and a novel conceptual framework for paradiplomacy, *The United States' Subnational Relations with Divided China* will be a useful resource for students and scholars of US foreign policy, the politics of China and Taiwan, paradiplomacy and international relations.

Get Started in Latin Absolute Beginner Course Apr 28 2020 Get Started in Latin is the ebook and audio course to follow if you are taking your first steps in Latin, whether classical or medieval. Follow a Latin story set in a medieval monastery, where conspiracy unfolds in the cloisters, Vikings threaten to attack, and young lovers set out to unmask the villains. And discover the principal authors of classical Latin and read quotations from their writings. The audio contains readings of the story and of the classical authors. All the Latin we are left with now are seemingly lifeless letters on a page or in stone. In its day Latin was a language to be heard: readings in the ancient world were recitals and performances - poems, speeches, histories even. So while you may not need the audio to learn the ABC of the language, you do if you want to experience and enjoy Latin to the full. And how do we know how it sounded? Find out inside. The free audio for this course is also available to download to the Teach Yourself Library app, or to stream on library.teachyourself.com. The ideal course to learn Latin if you're a beginner, this new edition includes: An introduction to classical Latin authors - ancient writers like Cicero, Tacitus and Virgil A medieval story : a Latin 'whodunnit' - practising each new point of language Grammatical explanations and vocabulary support in each unit Lots of exercises - to practise each new point of language Discover how Latin evolved through the centuries - and its immense impact on English Listen to the story and the classical authors on audio - to experience the sound of Latin "The best part of the book is its lively narrative...As carefully graded passages [the story sections] are much more useful than another collection I have used. The practice sections are excellent." Dr Conrad O'Briain, Trinity College Dublin "Absolutely THE best book for beginners." Waste Not, Want Not ?????????? ?Owain Mckimm 6/18 The enormous fires that burned through Australia last year and this year have scientists very concerned. They worry that when the rains fall, they will wash the ash left by the fires into the rivers and pollute Australia's water supply, a situation that would leave thousands of Australians without drinking water. This looming water crisis in Australia has also called attention to Taiwan's own dangers of water shortage. Although Taiwan has an average rainfall of 2,500 millimeters per year, its lack of storage capacity means that much of that rainfall flows into the ocean. In fact, the nation's reservoirs can only store about six weeks' worth of water before running completely dry. As a result, Taiwan faced water shortages nine times between 2002 and 2015. An additional element that perpetuates this problem is the low cost of water in Taiwan—one of the lowest in the world. Inexpensive water bills mean people hardly think about saving water. And although a rise in water prices could reduce Taiwan's water usage significantly, no politician is brave enough to suggest that solution. To reduce the risk of a severe water crisis in the future, it's therefore

up to us to cut back on the amount of water we use.

6/19 To figure out what actions are needed to conserve water, it helps to know where water is being wasted. In an average household, flushing the toilet and showering account for an overwhelming percentage of all water used. It stands to reason, then, that the most significant change you can make is to your bathroom habits. Everyone loves a long hot shower, but do try to limit your shower time to around five minutes. To help you stick to this rule, find a five-minute-long song that you can play while showering, and make sure you’re finished when it ends! Limiting your shower time is pointless if you’re allowing the shower water to drain away while it warms up. To solve this, collect that initial stream of cold water in a container. You can then use that water to flush your toilet. Besides trying to minimize the number of times you flush, check your toilet for leaks. After all, leakages are the biggest waste of water. You may think these small actions won’t make much of a difference, but there are over 23 million people in Taiwan. If everyone takes steps to waste less water, the nation’s water security is all but assured.
