American economic history describes the transition of a handful of struggling settlements on the Atlantic seaboard into the nation with the most successful economy in the world today. As the economy has developed, so have the methods used by economic historians to analyze the process. Interest in economic history has sharply increased in recent years among the public, policy-makers, and in the academy. The current economic turmoil, calling forth comparisons

with the Great Depression of the 1930s, is in part responsible for the surge in interest among the public and in policy circles. It has also stimulated greater scholarly research into past financial crises, the multiplier effects of fiscal and monetary policy, the dynamics of the housing market, and international economic cooperation and conflict. Other pressing policy issues--including the impending retirement of the Baby-Boom generation, the ongoing expansion of the healthcare sector, and the environmental challenges imposed by global climate change--have further increased demand for the long-run perspective given by economic history. Confronting this need, The Oxford Handbook of American Economic History affords access to the latest research on the crucial events, themes, and legacies of America's economic history--from colonial America, to the Civil War, up to present day. More than fifty contributors address topics as wide-ranging as immigration, agriculture, and urbanization. Over its two volumes, this handbook gives readers not only a comprehensive look at where the field of American economic history currently stands but where it is headed in the years to come. Endorsed by Cambridge International Examinations for the latest syllabus, this new edition of the the market-leading text provides a true international perspective. This title has been endorsed by Cambridge International Examinations for the latest Cambridge IGCSE (0450) and Cambridge O Level Business Studies (7115)

syllabuses. - Offers an international perspective through a wide range of up-to-date case studies - Reinforces understanding through a variety of activities and discussion points - Provides examination preparation with revisions questions and summaries throughout - Written in accessible language, but with plenty of detail for top-grade students

Non-occupant homeowners (NOH) differ from owner occupants in that they tend to have lower-risk credit characteristics, but may also have weaker incentives to maintain mortgage pay. when housing values fall. During the recent housing boom, the share of mortgage borrowing by NOH was relatively high in states where home values rose rapidly. After the housing boom, foreclosures on NOH mortgages in several Midwestern and Northeastern states reflected a high rate of foreclosure per mortgage, not a high vol. of mortgages to NOH. The reverse held true in coastal and mountain states. NV and FL have experienced the greatest impact overall, because they have both a high vol. of mortgages to NOH and a high rate of foreclosure on those mortgages. Illus. "Hurwitz describes the emotional extravagance that lies at the root of Mahler's popularity, the consistency of his symphonic thinking, and his dazzling and revolutionary use of orchestral instruments to create an expressive musical language that is varied in content and immediate in impact."--BOOK JACKET. In international tax law, the term 'beneficial ownership' refers to which parties

involved in a cross-border transaction are entitled to tax treaty benefits. However, determining beneficial ownership is a complex and often disputed issue, subject to different meanings in different countries. Archival research on its early use in tax treaties and in the developing OECD Model reveals that its meaning has changed dramatically over the decades, leading to new interpretations significantly affecting current tax practice and scholarship. This book, dedicated to establishing how beneficial ownership should ideally be interpreted, compares the use and interpretation of beneficial ownership, both current and historical, in a wide range of national jurisdictions as well as the EU, ultimately shedding a clearer light than has heretofore been available on the meaning of the term. In her very thorough analysis of the application of beneficial ownership, the author touches on such aspects as the following: – historical development of the beneficial ownership requirement as used in tax treaties and in the OECD Model Tax Convention on Income and on Capital; – rules of double taxation conventions; – application of the OECD’s Action Plan on Base Erosion and Profit-Shifting (BEPS); – the problem of so-called ‘white income’; – use of the substance-over-form principle; – attribution-of-income rules; and – the role of agents, nominees, and conduit companies. Specific analysis of the use and interpretation of beneficial ownership in a domestic law and treaty context in numerous jurisdictions – with particular emphasis on

the United Kingdom, Australia, the United States, and Germany – is a major feature of the presentation. As a thorough guide to determining whether a person claiming tax treaty benefits is the true owner – and which parties are excluded from treaty benefits and to what extent – this book will be of immeasurable value to lawyers, tax authorities, policymakers, and other professionals working with taxable international transactions of any kind. Farm structures in Central and Eastern Europe (CEE) today cover a whole spectrum of forms, which include small subsistence-oriented household plots, medium-sized commercial family farms, and large corporations. The agricultural sector in CEE definitely has not embraced the family farm as the dominant farming structure, thus confounding the original expectations of Western experts. On the other hand, agriculture did not collapse because of fragmentation and privatization, as predicted by conservative doomsayers. To address the concerns of the farming sector in CEE with relation to EU accession, a workshop was held in Warsaw, Poland in June 1999. This volume represents a selection of papers presented

at this workshop. It examines the reforms and policy changes necessary in the food and agriculture sectors of the ten countries that have started the accession process for eventual membership in the European Union (Bulgaria, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, Slovakia, and Slovenia). The papers are organized around the following three topics: [?] Evolving farm structures and competitiveness in agriculture; [?] Land laws and legal institutions for development of land markets and farm restructuring; and [?] Development of farm services for improved competitiveness. This volume will be of interest to agricultural policy makers and government officials in the candidate countries, EU officials, World Bank and FAO staff, development scholars, and all others interested in the process of agricultural reform in CEE. This book is for newly qualified teachers and PGCE students of business education and economics. It covers the training standards for NQTS but goes beyond this with a focus on the subject expertise they bring into teaching. This reference manual is designed to help those interested in passing the ASQ's certification exam for Six Sigma Green Belts and others who want a handy reference to the appropriate materials needed to conduct successful Green Belt projects. It is a reference handbook on running projects for those who are already knowledgeable about process improvement and variation reduction. The primary layout of the handbook follows the ASQ Body

of Knowledge (BoK) for the Certified Six Sigma Green Belt (CSSGB) updated in 2015. The authors were involved with the first edition handbook, and have utilized first edition user comments, numerous Six Sigma practitioners, and their own personal knowledge gained through helping others prepare for exams to bring together a handbook that they hope will be very beneficial to anyone seeking to pass the ASQ or other Green Belt exams. In addition to the primary text, the authors have added a number of new appendixes, an expanded acronym list, new practice exam questions, and other additional materials

Urbanisation and climate change are pushing cities to find novel pathways leading to a sustainable future. The urban context may be viewed as a new experimentation space to accelerate the transition to a circular economy. Urban symbiosis and the circular economy are emerging concepts attracting more and more attention within the urban context. Moreover, new business models are emerging around sharing and peer-to-peer practices, which are challenging existing roles of actors in society. These developments are having an important impact on the flows of resources and the use of the city infrastructure, and each research area has taken a different perspective in the analysis of such impacts. This Special Issue aims to explore what a “circular city” could constitute and how and why cities engage in circularity. This Special Issue includes seven high-quality papers on the theories and practices of circular

cities. Actors, concepts, methods, tools, the barriers to and enablers of circular cities are discussed and a solid base and inspiration for the future development of circular cities are provided. We differentiate the effects of passive institutional investors, which mainly refer to index funds that adopt a passive portfolio strategy, on firms' innovation activities and innovation strategies. Relying on plausibly exogenous variation in passive institutional ownership generated by Russell 1000/2000 index reconstitutions, we find that, with larger passive institutional ownership, while firms' countable innovation activities increase, they shift their innovation strategies by focusing more on exploitation of existing knowledge instead of exploring new technology. Enhanced monitoring by passive institutional investors through active votes could explain their positive effects on firms' innovation activities. Increasing risk aversion on the part of passive institutional investors appears the underlying force that drives firms' shift to incremental innovation. Our paper uncovers a subtle relation between institutional investors and innovation, which is largely ignored by earlier studies. Public-private partnerships (PPPs) play an increasingly prominent role in addressing global development challenges. United Nations agencies and other organizations are relying on PPPs to improve global health, facilitate access to scientific information, and encourage the diffusion of climate change technologies. For this reason, the 2030

Agenda for Sustainable Development highlights their centrality in the implementation of the Sustainable Development Goals (SDGs). At the same time, the intellectual property dimensions and implications of these efforts remain under-examined. Through selective case studies, this illuminating work contributes to a better understanding of the relationships between PPPs and intellectual property considered within a global knowledge governance framework, including innovation, capacity-building, technological learning, and diffusion. Linking the governance of intellectual property to the SDGs, this is the first book to chart the activities of PPPs at this important nexus. This book constitutes the refereed proceedings of the 20th International Working Conference on Requirements Engineering: Foundation for Software Quality, REFSQ 2014, held in Essen, Germany, in April 2013. The 23 papers presented together with 1 keynote were carefully reviewed and selected from 62 submissions. The REFSQ'15 conference is organized as a three-day symposium. The REFSQ'15 has chosen a special conference theme "I heard it first at RefsQ". Two conference days were devoted to presentation and discussion of scientific papers. The two days connect to the conference theme with a keynote, an invited talk and poster presentations. There were two parallel tracks on the third day: the Industry Track and the new Research Methodology Track. REFSQ 2015 seeks reports of

novel ideas and techniques that enhance the quality of RE's products and processes, as well as reflections on current research and industrial RE practices. The growing use of housing equity to support a range of activities and needs raises complex issues, particularly for older owners. In an environment in which older owners are pushed towards housing equity transactions to meet income and welfare costs, they are required to make choices from a complex and sometimes bewildering range of options. The transactions which facilitate the use of home

equity as a resource to spend in later life - from 'trading down' and 'ordinary' secured and unsecured debt to targeted products including reverse/lifetime mortgages, home reversion plans and sale-and-rentback agreements - raise important legal and regulatory issues. This book provides a contextual analysis of the financial transactions that older people enter into using their housing equity. It traces the protections afforded to older owners through the 'ordinary' law of property and contract, as well as the development of specific regulatory protections focused on targeted products. The book employs the notion of risk to highlight the nature and causes of the 'situational' vulnerabilities to which older people are now subject as 'consumers' of housing equity, showing that the older owner's personal situation is crucial in determining whether and why they may seek to release equity, the options and products available to them, and the impact of harms resulting from adverse transactions. The book critically evaluates the extent to which this context is incorporated in the legal frameworks through which these transactions are governed, as a measure of the 'appropriateness' of existing legal provision, as well as considering the arguments surrounding 'special protection' for older owners in housing equity transactions. Chinese cinema continues

to go from strength to strength. After art-house hits like Chen Kaige's Yellow Earth (1984) and Wong Kar-wai's In the Mood for Love (2000), the Oscar-winning success of Ang Lee's Crouching Tiger Hidden Dragon (2000) disproved the old myth that subtitled films could not succeed at the multiplex. Chinese Films in Focus II updates and expands the original Chinese Films in Focus: 25 New Takes with fourteen brand new essays, to offer thirty-four fresh and insightful readings of key individual films. The new edition addresses films from mainland China, Taiwan, Hong Kong and other parts of the Chinese diaspora and the historical coverage ranges from the 1930s to the present. The essays, by leading authorities on Chinese cinema as well as up-and-coming scholars, are concise, accessible, rich, and on the cutting edge of current research. Each contributor outlines existing writing and presents an original perspective on the film, making this volume a rich resource for classroom use, scholarly research and general reading for anyone wanting to understand more about the historical development and rich variety of Chinese cinema. Home ownership sectors in most European countries have grown in size. Whatever assets European households have acquired in recent decades, real estate appears to form a significant element in wealth portfolios. Frequently, national governments have been active in promoting the shift in tenure balance. The general question pursued in this book is about the gains and losses accruing to individual households by virtue of their position as home owners. The focus, here, is on financial gains and losses. It also concerns the losses, in the form of repayment risk, related to difficulties that some households may experience in meeting housing loan repayment schedules. The immediate background to this volume is the Conference Housing in Europe: New Challenges and Innovations in Tomorrow's Cities, held in Reykjavik, Iceland. Hosted by the Urban Studies

Institute of the University of Iceland and Centre for Housing and Property Research, Bifröst School of Business, it was held under the auspices of the European Network of Housing Researchers. The construction industry comes with many advanced accounting issues, audit procedures, and tax issues, which makes construction contractor engagements inherently higher risk than other engagements. As a result, practitioners and financial professionals should be prepared to address difficult issues such as look-back calculations, measuring progress of contracts, overhead allocations, and internal controls for construction contractors. In this book, some of the most pervasive issues in the construction industry and how to identify and manage the risks inherent in construction contractor engagements are discussed. This book shows how to: Apply complex accounting and financial reporting standards to construction contractors. Evaluate and rework audit processes to avoid common deficiencies in construction engagements. Identify tax compliance issues unique to the construction industry. "The applied research indicates that, to improve awareness, park education programs should be targeted specifically to the user groups primarily through outreach programs. Further, the Park's management programs should be highlighted, particularly the beneficial, tangible products and services (benefits) the Park provides to each user group... The closer the tie between reef

conditions and business earnings, the greater the users' support for reef conservation." Coral reefs are sometimes referred to as "canaries of the sea" because of their early warning ability to show near-shore oceanic stress. Because of their biological diversity, they are also called "rainforests of the sea." Coral reefs are vital to the well being of millions of people. Coral reef managers and government officials trying to save their valuable national resources have turned to research on coral reefs for help. The research presented in this publication merits a great deal of notice because the output is useful for decision support and training tools in integrated coastal zone management (ICZM). The work on cost-effectiveness analysis has developed integrated economic and ecological models, relying extensively on fuzzy logic procedures to model impacts and effects of interventions within the reef environment. By contrast, the marine system valuation work provides economic valuations of coral reefs, demonstrating the use of different modeling methods and treating key policy issues within this context. This publication will interest coastal zone experts and managers worldwide
